Giving publicly owned coal to private companies is incompatible with President Obama's stated commitment to stop runaway climate change. You must end the federal coal leasing program and do everything in your power to keep publicly owned coal in the ground. We don't need to subsidize the coal industry by offering publicly owned coal. Demand for electric power is declining in Wisconsin, and with reasonable wind energy and solar development, coal usage by power plants can be made vanishingly small.

RE: (RIN) 1012-AA13, Consolidated Federal Oil and Gas and Federal and Indian Coal Valuation Reform

Charging higher fees to private coal companies for the privilege of mining this publicly owned resource doesn't compute. All the coal under the surface of our nation needs to remain in place in order to sequester carbon dioxide which at one time made the planet uninhabitable to air-breathing creatures. Now that we know this, Interior should support President Obama's stated commitment to stop runaway climate change. Stop the federal coal leasing program and start subsidizing clean energy. Leave ALL coal in the ground.

RE: (RIN) 1012-AA13, Consolidated Federal Oil and Gas and Federal and Indian Coal Valuation Reform

It is unacceptable that we give away publicly owned coal at a fraction of its cost and often to internationally owned companies. Why!?! First: Why should Americans give away our national resources? Second: removing coal from the ground is bad for our federally owned lands and waterways. Thirdly: coal use is dirty and counter to our need to protect the atmosphere we all depend on and share. Burning coal is catastrophic to our global environment and letting it be burned overseas, where it is much less likely to have scrubbers and such on the smoke stacks makes no sense what so ever. Please immediately and forever stop the federal coal leasing program and do everything in your power to keep publicly owned coal in the ground.
