## General Comment

To whom it may concern,

I believe that the DOI is asking for to much here! We as americans and users of the power in this country can not afford to have our power prices increased, and by trying to raise the taxes of the coal companies it will ultimately affect us. What do you think provides us with our lights, heat, phones, computers. The production and transportation of coal for the most part and i know that you know that. By trying to gouge the coal companies it will affect everyone and everything in a negative way. Jobs will be lost, prices going up it will suck!! Why can't we figure out a way to use all of our resources for energy and have an abundance of it, that would improve the economy greatly. We need to build new power plants that will burn cleaner and will provide safe energy, it can be as you see in Asia. Ya the intial cost will be great but the return will be greater. We waste so much money in this country fighting against coal and yet it is our greatest resource, I don't get it.

Thank you
